SOLAR LAMP - Operating instructions

Congratulations on the purchase of your super solar light. To ensure that you have a lot of fun with it, you should observe the following rules:

1. The super solar light is hungry for sunlight - place it in a sunny spot during the day.
2. Depending on the occasion, you can set 3 different brightness levels with the enclosed magnet by placing it on the white, silver or black dots on the edge of the lid.
3. A jumper on the light circuit board switches the light on automatically when it gets dark. You have three plug-in options for brighter, darker or off.
4. The super solar light shines for approx. 8 hours at maximum brightness. At minimum brightness, it blinks for 20 days.
5. Creative minds can light up flowers, gemstones, shells or similar objects in the glass body.
6. The high-quality LiFePo4 battery offers a service life of up to 10 years if point 1 is observed.

With sunny greetings,
your Solar-Expert Team
