end of their useful life!

Parts list		
Qty.	Component	Value
1	Wooden parts kit	Multiple parts
1	Circuit board	50 x 36 mm
1	Resistor	680 kOhm
1	Diode	1N4001
2	Capacitor	150 nF
1	Capacitor	220 nF
1	IC socket	16 pole
1	Potentiometer	220 kOhm
6	Capacitor	100 uF
1	IC	TEA 2025
2	Red cable	15 cm
2	Black cable	15 cm
4	Screws M4 x 10	M4
4	Nut M4	M4
1	Loudspeaker	5 Watt / 8 Ohm
2	Screws M2 x 10	M2
2	Nut M2	M2
1	Switch	Commutator
1	Cable with cinch connector	approx. 45 cm
1	Cable tie	black
1	Battery clip	for 9 V block
8	Wooden screw	2 x 12
1	Battery	9 volt block 6F22
		1

Active speakers for smartphones and MP3 players, soldering kit

We recommend: adult supervision during assembly and soldering!

HINWEIS - NOTE - REMARQUE - LET OP!

bei. Die Anleitungen in den Sprachen Englisch, Französisch und Niederländisch können kostenlos in unserem Shop heruntergeladen werden.

(EN) Instructions in German are enclosed in the packaging.

The instructions in English, French or Dutch can be downloaded in our shop for free. (FR) Des instructions en allemand sont fournies avec l'emballage.

Les instructions en anglais, français, et néerlandais sont à télécharger gratuitement dans notre boutique. (NL) De Duitse handleiding is bij de verpakking inbegrepen. De handleidingen voor de talen Engels, Frans en

(DT) Eine ausführliche Anleitung in deutscher Sprache liegt der Verpackung

www.sol-expert-group.de

You will need:

Soldering iron, solder, tweezers, small screwdriver, side cutters, small phillips srewdriver, hammer, sandpaper

The active speaker for smartphones and MP3 players

General: This soldering kit is intended as a simple introduction to the basics of soldering. It is ideal for guided soldering courses in school and workshops. The active speakers can further be used in holiday programmes, school camps and other events related to soldering.

The function of the active speaker for smartphones and MP3 players

This soldering kit contains all parts necessary to make a fully functional active speaker for mobile phones and MP3 players, with a stylish wooden case. Soldering and glueing are the most important aspects of the task. And thanks to the wonderful step-by-step instructutions, this project will also be a success. The reward: take away a wonderful sound (battery operated). Open your music app, connect the speaker, turn it on, and you are off! The battery is included in delivery.

Safety Notes

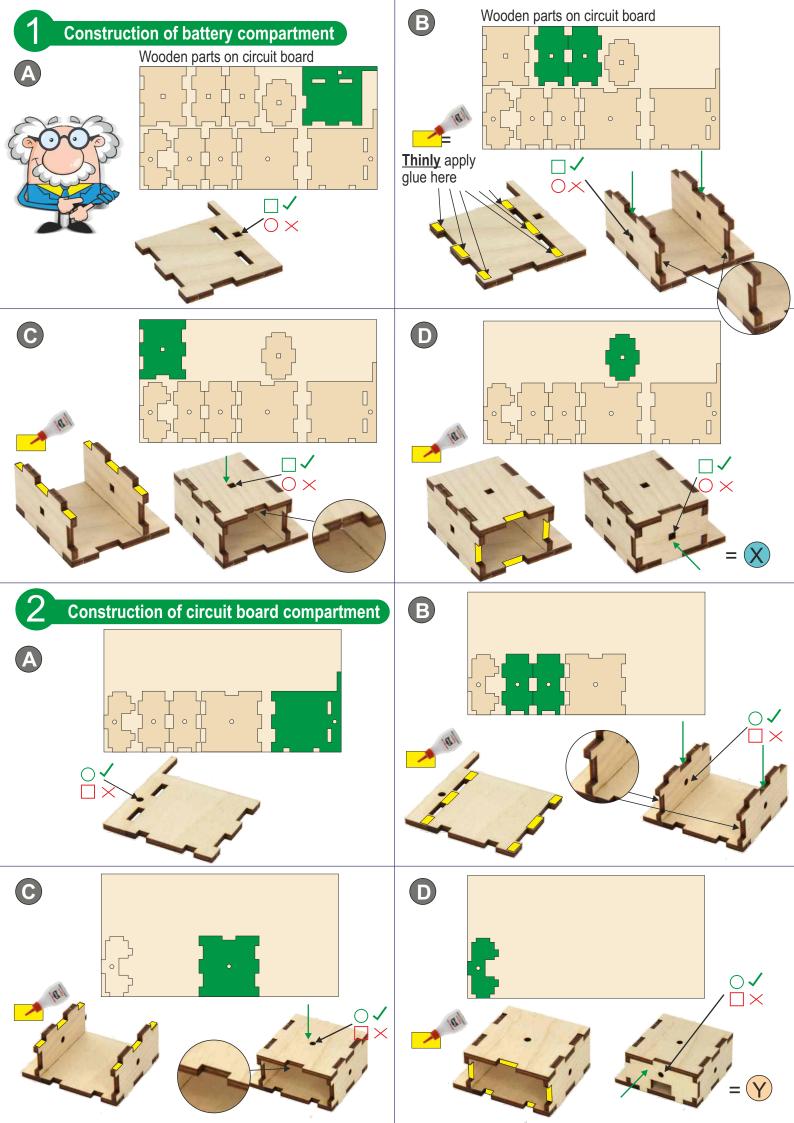

- Keep these instructions in a safe place for future reference! They contain important information.
- If the storage battery is flat, only replace it with a new battery with the same specifications. (9 V block 6F22)
- This kit is only intended for battery operation.
- The soldering iron, the solder and the components being soldered become very hot during soldering. Be very careful!
- Always use a soldering base when soldering! This will prevent the components and the board from slipping.
- We recommend a soldering iron stand to hold the soldering iron safely during assembly.
- Never connect the kit to 230 V mains voltage! Acute danger to life!

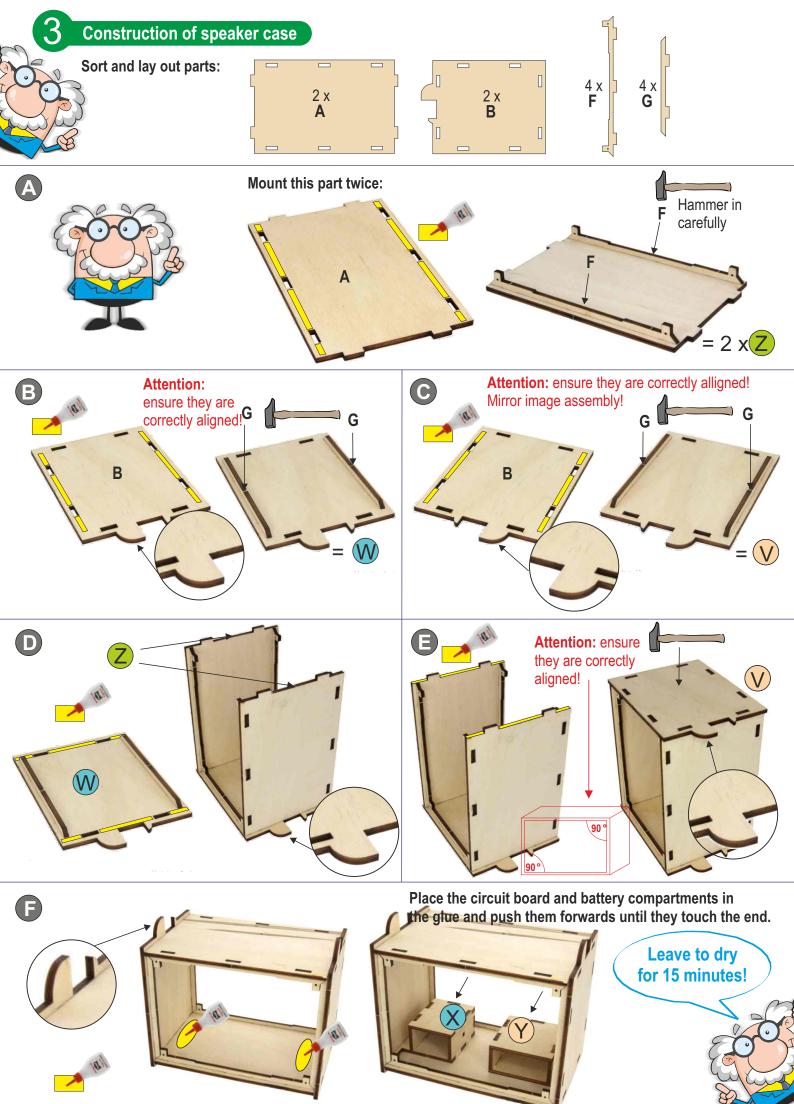

Environmental Warnings

General: Please return the circuit board to a certified disposal company at the end of its useful life. They will ensure the circuit board is disposed of in accordance with the law. This is environmentally friendly and actively contributes to the protection of the environment.

Battery Ordinance: You have purchased a battery-operated product from us. Used batteries must not be discarded in the household waste. Consumers are legally obligated to return batteries to a suitable collection site. Used batteries contain valuable raw materials which are recyclable. You may also send your batteries to: SOL-EXPERT group, Mehlisstrasse 19, 88225 Baindt.

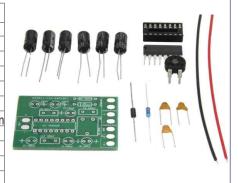

Sort and lay out all parts:

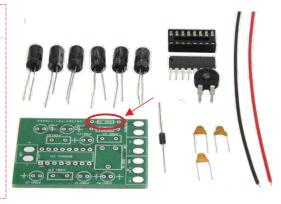

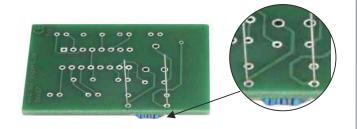

Bend the resistor just enough so that it can be passed through the soldering lands.

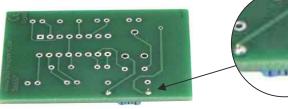

With the resistor, you don't have to pay attention to the polarity.

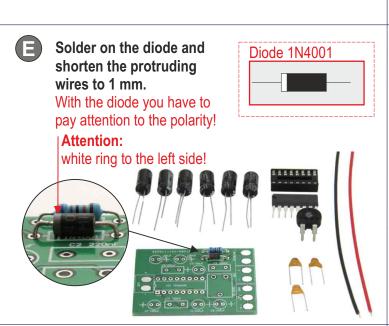

Push the resistor leads through the circuit board (from the labeled side)

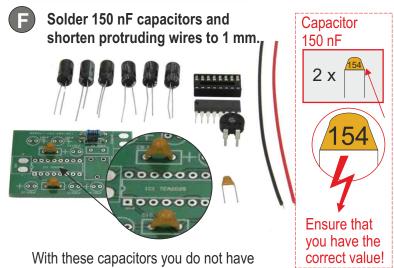

Solder the resistor leads and shorten protruding wires to a length of approx 1mm above the solder point using side cutters.

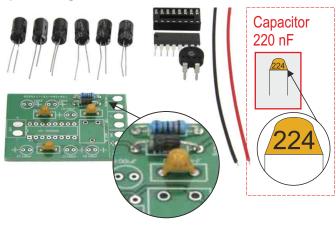

If the length of the wires exceeds 1 mm, problems may arise when assembling the circuit board.

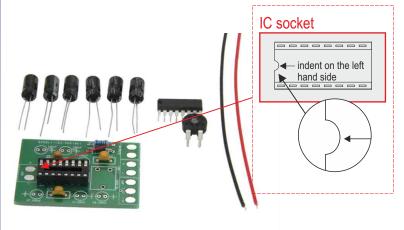

Solder on 220 nF capacitor and trim protruding wires.

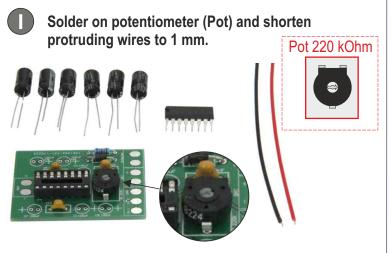

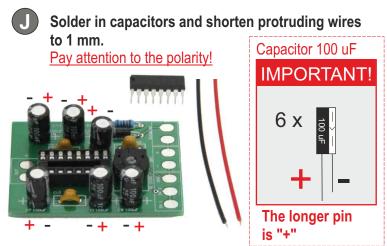

With this capacitor you do not have to pay attention to polarity.

Solder on IC socket. Shorten protruding wires to 1 mm. With the IC socket pay attention to polarity!

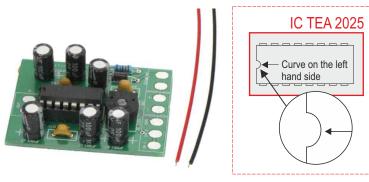

to pay attention to polarity.

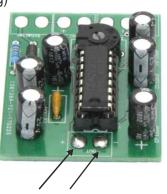

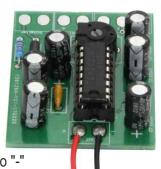

Apply a little solder to the 2 contacts. (Pretinning)

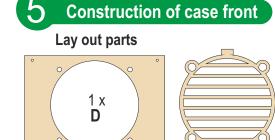

Solder the red and black cables (both 15cm) to the solder pad.

1 x **E** Apply a little solder to the 7 contacts (Pretinning)

A Install 4 M4 x 10mm screws to the front of the speaker

B Install speaker

Secure and screw in with 4 x M4 nuts

Turn over

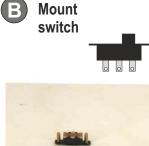

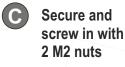

Affix the protective grating (can also be glued)

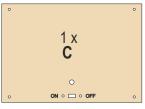

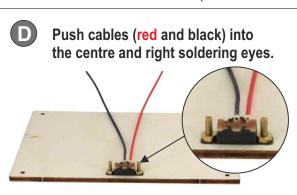

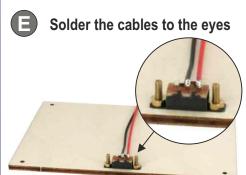

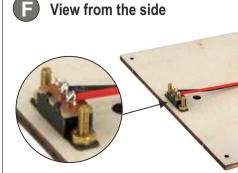

Inscription "ON - OFF" should be at the bottom

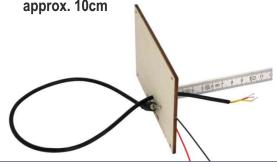

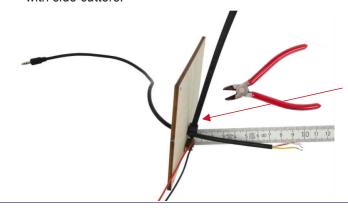

Cabling the case

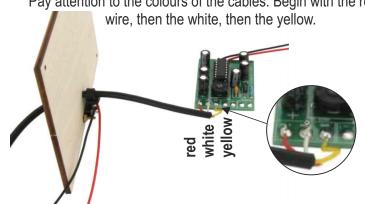

Pass the connection cable through the whole on the back, until the part of the cable that is inside measues approx. 10cm

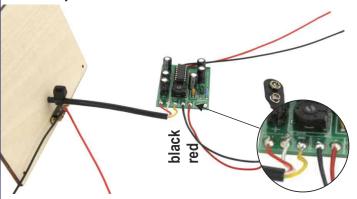

Put a cable tie around the cable, and pull it very tight (tension relief). Cut off the remaining cable with side cutters.

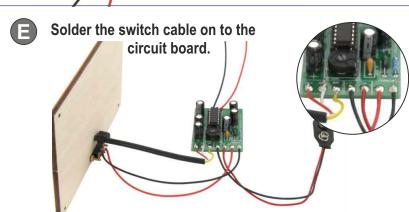

Solder cable wires individually to the circuit board. Pay attention to the colours of the cables. Begin with the red wire, then the white, then the yellow.

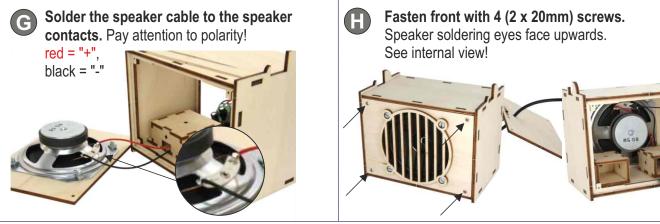

Solder the battery clip cable to the circuit board. Pay attention to the colours of the cables!

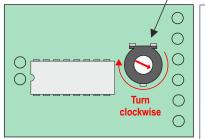

Thread the speaker cables through the circuit board compartment

Now turn the pot clockwise very slowly. As soon as the box begins to rattle because the volume is too high, turn the pot back a little, until you get a clearer tone. Now the active amplifier is properly installed

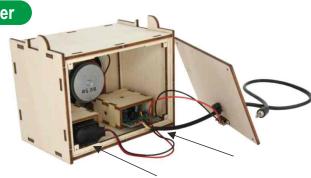

Now turn the active speaker off again, by moving the switch to OFF.

Push the curcuit board and the battery into the holders.

(C)

Close back and fasten with 4 screws (2 x 10mm).

And now: connect phone, open music app and turn on

Always turn the speaker off when you are not using it, otherwise the battery will go flat. When this eventually happens, unscrew the back, change the battery, and screw the back on again.
